Dear Valued Customer,

We are pleased to announce that Optic Nerve Formula has been revised to reflect the latest research on nutrition’s role in glaucoma. The new formula reflects a greater recognition of the role of ocular blood flow*, plus emerging research highlighting the value of supporting mitochondrial function for neuroprotection. Key changes include:

- **New! CoQ₁₀ (50 mg)** – Co-enzyme Q₁₀ (CoQ₁₀) plays a key role in mitochondria, the energy-producing components of our cells. Poor mitochondrial function is believed to be an important factor in neurodegenerative diseases. CoQ₁₀ has been found to help protect nerve cells and is also linked with heart health benefits. The 50 mg added has been shown to increase serum levels.

- **More bilberry extract (increased from 110 mg to 115 mg)** – Increasing clinical evidence suggests antioxidant pigments in berries, called anthocyanins, reduce inflammation. New studies also suggest bilberry extract favorably effects ocular blood flow. The new level reflects that used in a clinical trial reporting improved ocular blood flow in patients with elevated eye pressure.

Despite these improvements, the price of Optic Nerve Formula will not change.
